

PLUTO (Pediatric Lupus Trial Of Belimumab)

BEL114055: GSK1550188. A Multicenter, Randomized, Parallel-Group, Placebo-Controlled, Double-Blind Trial to Evaluate the Safety, Efficacy, and Pharmacokinetics of Belimumab, a Human Monoclonal Anti-BLyS Antibody, Plus Standard Therapy in Pediatric Patients With SLE

Study design

- **PLUTO** is a multicenter study of belimumab (10 mg/kg) plus background standard therapy in 100 pediatric subjects 5–17 years of age with active SLE (SELENA SLEDAI ≥ 8); consisting of three separate periods:
 - **Part A:** Randomized, placebo-controlled, double-blind **52-week treatment**
 - **Part B:** **Long-term open-label** extension for those who complete Part A
 - **Part C:** **Long-term safety follow-up** phase for those who withdraw from Part A or B
- Staggered enrollment by age cohort
- IDMC safety and efficacy review
